# **PROVIDED SERVICES JURBYFLOW**

### **ULTRAFILTRATION SERIES UF**

Designed to remove from natural and wastewater:

- suspended solids;
- colloidal impurities, iron, aluminum, humates;
- turbidity and color of water;
- SDI < 3.

#### **REVERSE OSMOSIS SERIES RO**

Designed to remove dissolved impurities and desalinate water with minimal consumption of chemicals.

### ELECTRODEIONIZATION SERIES EDI

Designed for deep water desalination reducing electrical conductivity to 0,1  $\mu$ S by combining ion exchange and electrodialysis methods.

Designed to remove dissolved gases (oxygen, carbon dioxide, etc.) from water.

# **PROVIDED SERVICES JURBYFLOW**

### **SEA WATER DESALINATION**

Reverse osmosis (RO) is the most widely used membrane desalination technology designed to desalinate water with minimal consumption of chemicals.

Membrane processes use reverse osmosis and high pressure to force saltwater through very fine, porous filters that retain the salts, leaving pure water on one side of the membrane and the waste stream on the other side.

The salts and other impurities are retained on the side of the saltwater supply. RO is efficient for low or high concentrations of salts and can thus be used to treat brackish water as well as seawater.

# PROVIDED SERVICES AQUAHARD

# ION EXCHANGE FILTRATION PLANTS SERIES I

Designed for purification of natural and wastewater from dissolved impurities by ion exchange technology.

# Ę

### **PUMP STATIONS SERIES P**
